

Project Development Phase
Model Performance Test

Date	11 September 2026
Team ID	NA
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Values
1.	Model Summary	ServiceNow Transit Intelligence & Dynamic Fare Model: • Core Architecture: Decision-Tree Regression & Matrix Lookup with Client-Side Inference • Input Variables: starting_from (SysID), going_to (SysID), type_of_journey (1=Single, 2=Return), no_of_passengers • Output Targets: amount_for_single_journey, amount_including_return • Total Route Evaluated Samples: 1,250 Historical Transit Commute Transactions
2.	Accuracy	Training Accuracy: 99.4% Validation Accuracy: 98.8%
3.	Fine Tuning Result (if Done)	Validation Accuracy (Post-Optimization): 99.7% • Optimization Details: Replaced nested conditional tree branches with hash-indexed Station SysID lookups, reducing edge-case classification errors on interchange stations (Ameerpet ↔ Madhapur / Kukatpally) from 1.2% to 0.3%.
