

## Ideation Phase

### Define the Problem Statements

|               |                                              |
|---------------|----------------------------------------------|
| Date          | 11 September 2026                            |
| Team ID       | NA                                           |
| Project Name  | Metro Ticket Generating System in ServiceNow |
| Maximum Marks | 2 Marks                                      |

| Problem Statement (PS) | I am (Customer)                                                               | I'm trying to                                                            | But                                                                                                             | Because                                                                                                     | Which makes me feel                                                         |
|------------------------|-------------------------------------------------------------------------------|--------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| PS-1                   | A daily office commuter rushing to board the metro during peak morning hours  | Quickly purchase my metro transit ticket using UPI on my smartphone      | I get stuck in physical ticketing queues for 15 to 20 minutes                                                   | Stations still rely on manual token dispensing booths and cash counters that cause massive bottlenecks      | <b>Frustrated and anxious</b> about missing my train and being late to work |
| PS-2                   | A student traveling across interchange lines with return journey requirements | Book a return trip ticket online in advance and know my exact route fare | I face manual fare calculation errors and end up with static web text receipts that turnstile gates cannot scan | The booking system lacks automatic route-to-fare scripting and does not issue portable, dynamic 2D barcodes | <b>Helpless and annoyed</b> by the lack of scannable, paperless gate access |
